

FEEL THE CHANGE

JOIN THE EVOLUTION IN NUTRITIONAL MANAGEMENT

Welcome to PKU GOLIKE!
**An innovation now approved for
the treatment of PKU in the UK.**

What makes this product different?

The Physiomimic Technology™ is the unique attribute for PKU GOLIKE.

PKU GOLIKE provides a scientifically proven prolonged release of only the essential amino acids into the body.

This allows for a more physiological absorption of amino acids (AAs), mimicking dietary proteins, with minimal taste, odour and aftertaste.

This can lead to improved compliance improved compliance and an overall improvement in quality of life in comparison to conventional AA supplements.

This graph below shows a more physiological absorption of AAs with PKU GOLIKE similar to natural proteins compared to free AAs.

HOW TO TAKE PKU GOLIKE?

PKU GOLIKE is versatile and can be consumed in different ways, depending on how you prefer to take your AA mix

To explore new ways, add it to creamy food, smoothies and thick drinks at the end of each preparation.

Mix it with cold and warm (not too hot) recipes and consume shortly after preparation.

One sachet can be used for different preparations but within 24 hours after opening.

Granules of **PKU GOLIKE** remain intact when mixed with food and drinks, to ensure that the original flavour is not altered.

The amount of **PKU GOLIKE** to be added can vary according to your preference on texture and taste. For better texture and higher degree of acceptability, our general recommendation would be to use up to a whole sachet for main dishes (e.g. soups, pasta and veggie burgers) and approximately half a sachet for sauces, creams and desserts (applesauce, jelly and yogurt).

Please refer to your doctor, dietician or your medical centre to discuss daily doses, depending on age, bodyweight, medical condition and any special conditions (e.g. pregnancy and breast-feeding).

PKU GOLIKE must be used under medical supervision.

PKU GOLIKE is classed as a food for special medical purposes for the dietary management of phenylketonuria (PKU). Use under medical supervision. Not for use as a sole source of nutrition.
